AB	The present invention relates to compns., articles of manuf., methods of prepn. thereof, methods of use thereof, etc., for enhancement of sexual pleasure, conditions, disorders, and diseases related to reproductive physiol. and systems, esp. of mammalian females. For instance, the present invention relates to all aspects of modulating the female sexual response, including female sexual dysfunction, such as female sexual arousal disorders (FSAD), orgasmic disorders, and sexual pain disorders, and enhancing female sexual pleasure and satisfaction of the female sexual experience. Accordingly, the present invention relates to compns. comprising botanical exts., active agents, etc., which are useful to treat or affect any of the aforementioned conditions. For example, the present invention relates to a compn., preferably for topical or local use, which				

- comprises one or more of the following ingredients, including, but not limited to, \*\*\*borage\*\*\* \*\*\*seed\*\*\* \*\*\*oil\*\*\*, \*\*\*Angelica\*\*\* pubescens root and other \*\*\*angelica\*\*\* species, Coleus forskohlii ext., vinpocetine, ferulic acid, magnesium, ascorbyl palmitate, capric/caprylic triglyceride, silica, and equiv. thereof. Case example of 15 women benefited from using the above compn. is reported.

AB Potential and documented interactions between alternative therapy agents and warfarin are discussed. An estimated one third of adults in the United States use alternative therapies, including herbs. A major safety concern is potential interactions of alternative medicine products with prescription medications. This issue is especially important with respect to drugs with narrow therapeutic indexes, such as warfarin. Herbal products that may potentially increase the risk of bleeding or potentiate the effects of warfarin therapy include \*\*\*angelica\*\*\* root, arnica flower, anise, asafoetida, bogbean, \*\*\*borage\*\*\* \*\*\*seed\*\*\* \*\*\*oil\*\*\*, bromelain, capsicum, celery, chamomile, clove, fenugreek, feverfew, garlic, ginger ginkgo, horse chestnut, licorice root, lovage root, meadowsweet, onion, parsley, passionflower herb, poplar, quassia, red clover, rue, sweet clover, turmeric, and willow bark. Products that have been associated with documented reports of potential interactions with warfarin include coenzyme Q10, danshen, devil's claw, dong quai, ginseng, green tea, papain, and vitamin E. Interpretation of the available information on herb-warfarin interactions is difficult because nearly all of it is based on in vitro data, animal studies, or individual case reports. More study is needed to confirm and assess the clinical significance of these potential interactions. There is evidence that a wide range of alternative therapy products have the potential to interact with warfarin. Pharmacists and other health care professionals should question all patients about use of alternative therapies and report documented interactions to FDA's MedWatch program.

- AB NC/Nga mice, models for atopic dermatitis, were treated with Acmachick and Red-Wagurasu ointment solely or jointly for 21 days, and their effects on dermatitis and total IgE were assessed. Sole administration of Acmachick for 21 days significantly suppressed deterioration of dermatitis on Day 3 of administration in comparison with the control value, but the dermatitis score on Day 21 of administration in the Acmachick group was similar to that in the control group; deterioration of dermatitis was not suppressed by Acmachick markedly. However, Acmachick tended to suppress increase in total IgE, although no significant difference from the control value was seen. The body weight in the Acmachick group changed at markedly higher levels than that in the Prednisolone ointment group. Sole administration of Red-Wagurasu ointment and joint administration of Acmachick and Red-Wagurasu ointment significantly suppressed deterioration of dermatitis on Days 3-21 of administration in comparison with the corresponding control values. However, the values of total IgE in the Red-Wagurasu ointment group and the Acmachick with Red-Wagurasu ointment group were similar to the corresponding control values; suppression of increase in IgE by Acmachick was not ascertained in either group. The body weight in these groups changed at higher levels than that in the Prednisolone ointment group. Prednisolone ointment significantly suppressed deterioration of dermatitis in comparison with the control value, and on Day 21 of administration it significantly suppressed increase in total IgE. Accordingly, it is concluded that there was no problem about the study system employed in the present study. According to the histopathological examination on representative animals of each group, such ulcers as seen in the cervical-dorsal skin and auricles in the non-treated group and Prednisolone ointment group were not noted in the Acmachick group, Red-Wagurasu ointment group, or Achmachick with Red-Wagurasu ointment group. Phologocyte infiltrartion noted in the Achmachick group was of smaller magnitude than that in the control group. As described above, Achmachick suppressed deterioration of the early stages of dermatitis under the dosing conditions of the present study. Achmachick also suppressed increase in total IgE, although the effect was weaker than that of Prednisolone ointment. On the other hand, we were unable to ascertain whether sole administration of Red-Wagurasu ointment or joint administration of Acmachick and Red-Wagurasu ointment suppressed increase in total IgE. However, it was ascertained that both suppressed dermatic ulcers histopathologically, had no side effects as Prednisolone ointment has, and markedly suppressed deterioration of dermatitis. Prednisolone ointment, a steroidal product for external application, decreased body weight, whereas Acmachick, in particular, did not have such marked effect on body weight.

STA New

AB Three patients with contact allergy to medical herbs were reported. 1) Case 1 : A 36-year-old female had acute \*\*\*dermatitis\*\*\* on the head, forehead, periauricular regions and nape, accompanying with edema of the face about one month after applying the chinese product, 101 hair regrowth liniment (Rhangguang). The product contains mainly ginseng \*\*\*root\*\*\* , safflower, \*\*\*angelica\*\*\* \*\*\*root\*\*\* , astragalus \*\*\*root\*\*\* , peach kernel, Salvia multiorrhiza, Cnidium Rhizome and alcohol etc.. Patch tests showed very strong positive reactions to the liniment and negative reaction to ethanol at 3 days. The results suggest that some herb in it cause allergic contact \*\*\*dermatitis\*\*\* . Potentials to elicit irritant and allergic contact \*\*\*dermatitis\*\*\* reactions were evaluated with control subjects. 2) Case 2 : A 24-year-old female had eczema on perioral region 2 weeks after applying ointment containing ginseng root extract in petrolatum. Both the ointment and the ethanolic extract of ginseng root produced strong positive reactions, but not petrolatum at 3 days. It is concluded that some ingredient of ginseng root may be allergen. 3) Case 3 : A 40-year-old female had acute \*\*\*dermatitis\*\*\* on the V-neck and breast about one month after applying the chinese bust development cream containing hop and safflower. Patch testing with the cream was intensely positive, but not 101 hair regrowth liniment negative and the vehicle. This might speak for a pathogenetic role of hop in allergic contact \*\*\*dermatitis\*\*\* . (author abst.)

TITLE: Skin caring cream containing e.g. Dahurian angelica root for removing freckles and wrinkles

INVENTOR: TIAN, H

PRIORITY-DATA: 1994CN-0100204 (January 6, 1994)

PATENT-FAMILY:

PUB-NO	PUB-DATE	LANGUAGE	PAGES	MAIN-IPC
CN 1104886 A	July 12, 1995	N/A	000	A61K 007/48

INT-CL (IPC): A61K007/48

ABSTRACTED-PUB-NO: CN 1104886A

BASIC-ABSTRACT: The cream is composed of: (i) the traditional Chinese medicinal components, Dahurian angelica root, rhizome typhonii and pearl powder; and (ii) the Western medicine, metronidazole and VE, and cream for ordinary cosmetics. It is prepared by mixing and processing.

ADVANTAGE - The compatibility and osmosis actions of the medicaments, allows

the cream to maintain the metabolism of skin cells, soften facial skin cuticles and improve blood circulation to skin to remove freckles, acne and wrinkles. In addition, the cream also brightens and moisturises the skin and stops itching. Furthermore, the cream is simple to prepare, convenient to apply without toxic side effects and has a effective rate of up to 100%.

AB	<p>The present invention relates to compns., articles of manuf., methods of prepn. thereof, methods of use thereof, etc., for enhancement of sexual pleasure, conditions, disorders, and diseases related to reproductive physiol. and systems, esp. of mammalian females. For instance, the present invention relates to all aspects of modulating the female sexual response, including female sexual dysfunction, such as female sexual arousal disorders (FSAD), orgasmic disorders, and sexual pain disorders, and enhancing female sexual pleasure and satisfaction of the female sexual experience. Accordingly, the present invention relates to compns. comprising botanical exts., active agents, etc., which are useful to treat or affect any of the aforementioned conditions. For example, the present invention relates to a compn., preferably for topical or local use, which comprises one or more of the following ingredients, including, but not limited to, <b>borage seed oil</b>, <b>Angelica pubescens</b> root and other <b>angelica</b> species, <b>Coleus forskohlii</b> ext., vinpocetine, ferulic acid, magnesium, ascorbyl palmitate, capric/caprylic triglyceride, silica, and equiv. thereof.</p>

## Borage (*Borago officinalis*) L.

frames / noframes

### Synonyms

Danish	Hjulkrone
Dutch	Bernagie, Borage, Komkommerkruid
Estonian	Harilik kurgirohi
Finnish	Purasruoho, Kurkkuyrtti
French	Bourrache officinale
Gaelic	Borrach, Borraist, Borraigh
German	Borretsch, Gurkenkraut
Hungarian	Borrágófű, Borágó, Borvirág
Polish	Ogorecznik lekarski
Swedish	Gurkört

Borage (flowering plant)

### Used plant part

Fresh leaves. The blue flowers are sometimes tried as a food colorant (see also [annatto](#)).

### Plant family

[Boraginaceae](#) (borage family)

### Sensoric quality

Borage's taste is rather weak and very similar to fresh cucumber.

### Main constituents

The leaves contain an essential oil (below 0.1%) dominated by 2,6 nonadienal, which is also a main components in cucumber aroma (*cucumber aldehyd*).

Several non-volatile components have also been identified, among those the toxic pyrolizidine alkaloids intermedine, lycopsamine, amabiline and supinine. It has, therefore, been argued that borage is an unsafe herb when used in folk medicine; the risks associated with casual culinary usage are probably negligible.

### Origin

The plant grows wild in Central and Eastern Europe.

### Etymology

The name derives from Arabic *abu buraq* "father of sweat", on account of its diaphoretic powers.

The characteristic cucumber aroma gives rise to names like Swedish *gurkört* and German *Gurkenkraut* "cucumber herb"; the latter name is also used for [dill](#) because of its frequent use to flavour boiled or

Borage leaf

mustard paste.

There are countless variants of this sauce, most of which are loathed by Frankfurt's true inhabitants. Adding pickled cucumbers is quite popular, and more herbs may be employed, of which dill, lovage and tarragon are most common. Similar recipes, probably predecessors, are called *sauce vert* in France; the recipe does also have some feature in common with Ligurian *pesto* (see basil).

Young flowers of borage can be pink and become blue only in the course of their individual flowering period. Other plants form flowers which are blue from the beginning.
